

PRODUCT DESCRIPTION

Dance Floor is the ideal flooring surface for practice and performance spaces requiring a durable, matte surface. Used by dance and theatre facilities everywhere, Dance Floor is ideal for touring companies because it is lightweight and portable.

At a weight of less than two pounds per linear foot, Dance Floor can be easily carried from venue to venue. It can be rolled and unrolled again and again. Rosco Dance Floor will not crack, separate or fracture.

Dance Floor is a two-sided floor, featuring a different color on each side. Both sides offer the same non-skid finish designed for the controlled slip preferred by dancers. The matte finish helps prevent distracting reflections.

Dance Floor is one of the floors that Rosco offers in its Floor System Range. Other Rosco floor products offer a wide variety of colors for a range of different applications, including ones designed for use in permanent installations and as decorative elements. All Rosco Dance Floors carry a five-year limited warranty.

A full roll of Dance Floor weighs 250 lbs.
